

JUDE DELA CRUZ

FULL STACK DEVELOPER

PROFILE

Experienced **Full Stack Developer with 8+ years of professional experience** delivering enterprise-level web and desktop applications. Specialized in **Python, PHP, and database-driven systems** with strong expertise in system architecture, billing logic, and ERP solutions. Known for analytical problem-solving, attention to detail, and leading development teams to build reliable, scalable, and user-friendly software solutions.

EXPERIENCE

LEAD SOFTWARE DEVELOPER

AsianLand Strategies Corporation | 2017 - Present

- Lead a team of developers in designing and maintaining enterprise systems
- Architect full-stack applications using Python, PHP, MySQL, and PostgreSQL
- Design and optimize databases for performance, accuracy, and scalability
- Translate business requirements into technical solutions
- Conduct code reviews, mentoring, and technical planning

AWARDS

- Supervisor of the Year – IT Supervisor (2024)
- Staff of the Year – Software Developer (2021)

EDUCATION

BACHELOR OF SCIENCE IN MATHEMATICS

Major in Computer Science
Bulacan State University | 2014 – 2016

- 📞 0956-130-5511
- ✉️ judedelacruz2025@gmail.com
- 📍 0682 Santol , Balagtas, Bulacan
- 🌐 dev-judedel.github.io/my-portfolio/

SKILLS

Backend Development

- Python (Flask, Django, GTK/Glade)
- PHP (Native PHP, Laravel)
- REST API Design & Integration

Database & Data

- MySQL, PostgreSQL
- Database Design, Optimization & Migration
- Data Modeling & Reporting Automation

Frontend

- HTML, CSS, JavaScript
- Responsive Web Design
- Bootstrap, Chart.js

Tools & Practices

- Git Version Control
- Software Architecture & System Design
- Debugging & Performance Optimization
- Team Collaboration & Mentorship
- Fast Learner of New Technologies

MAJOR PROJECT ACHIEVEMENTS

Enterprise Resource Planning (ERP) System

- Led development of custom internal ERP system using Native PHP and MySQL
- Architected core modules: Inventory Management, CRM with advanced payment logic (interest/principal calculations)
- Designed comprehensive database structure and system foundation from ground up
- Coordinated 4-developer team to deliver scalable enterprise solution supporting all company operations
- Reduced manual processing time and improved data accuracy across departments

Real Estate Management & Utility Billing System

Phase 1 - CMIS (Computer Management Information System):

- Developed desktop application using Python and GTK/Glade for comprehensive real estate client management
- Built modules for property inventory tracking, buyer information management, and payment processing
- Created automated reporting system using Pandas and openpyxl, adding critical reporting capabilities to existing systems lacking these modules
- Streamlined data analysis and decision-making processes for management

Phase 2 - Web-based Utility System Migration:

- Successfully migrated Python desktop application to scalable PHP web-based platform
- Implemented Electronic Statement of Account (e-SOA) delivery system via automated email - reduced operational costs significantly by eliminating traditional mail delivery
- Developed automated billing computation engine for streetlights and maintenance fees
- Built Point-of-Sale (POS) module for streamlined payment collection and processing
- Improved billing efficiency and reduced processing time by 60%

Subdivision Amenities Booking & QR Gate Pass System

- Architected integrated multi-tenant system using PHP Laravel and MySQL for multiple subdivisions
- Designed dynamic setup allowing scalable deployment across all subdivision properties
- Developed online booking module for amenities (clubhouse, tennis courts, swimming pools)
- Implemented QR code generation and validation system for secure subdivision gate access control
- Led 4-developer team through full software development lifecycle
- Enhanced security and user convenience while reducing manual gate pass processing

Additional Technical Contributions:

- Database Migration & Optimization: Automated data migration tools between MySQL and PostgreSQL with validation and error handling
- Reporting Dashboards: Created data visualization platforms using Chart.js and Bootstrap for real-time business intelligence
- Legacy System Enhancement: Extended existing systems with missing reporting modules using Python scripting
